# Byebye Data Eraser Crack Keygen For Windows [Latest]

Would you like to get rid of some data from your PC? Are your personal files and folders starting to feel a little too crowded on your hard drive, and you have a question: "What if I accidentally delete important personal data?" If you answered "Yes" to the questions above, here's the software program you've been looking for! Byebye Data Eraser is developed by JMRSoft ( It is a widely used data erasing program that can completely erase all data on your computer, although its removal is always irreversible.

---

Although many free data erasing software programs are available, most cannot cover more than individual files or folders. If you're looking for a solution that can erase any files and folders at once, then Byebye Data Eraser is the program for you! This tool allows you to select specific file(s) or entire directories to be deleted, and then runs a series of different erasing algorithms, thereby completely obliterating all the data. The algorithms include: Plain overwriting with zeros or ones, overwriting zeros on entire drive surface. The WinPE bootable image, and the disk wipe utilities.

---

Byebye Data Eraser is very easy to use. Simply select the files, folders, or entire drive to be erased, and click the Start button. This program will always overwrite the deleted files with random binary values, but in case you want to clean the entire drive from confidential data, you can use one of the following advanced algorithms: --GOST: the Generalized Oversampling Technique (GOST) is a way to securely destroy data. It always produces a 64 bit hash (128 bit internally) of each block of data, and then overwrites it several times. This makes it virtually

---

impossible to recover the original data. The estimated level of protection is 99.99%! --DoD: The DoD (Department of Defense) algorithm works in a similar manner to the GOST algorithm. Data is erased over and over again, with a special shift in the binary value between iterations. This makes it highly improbable to ever recover the original data. The estimated level of protection is 99.999%! --US Army AR: The AR (Army Random) algorithm, developed by the United States Army, is the most advanced algorithm available today. This is currently the most widely used

---

standard in the military world, but it is still susceptible to recovery. The data is scrambled so many
